Technical Information

The process of cold pre-fermentation maceration of the destemmed and crushed berries is employed to enhance the fruit and soften the tannins. The fermentation process is carried out with the aid of indigenous yeasts in small open tanks, with manual punch-downs. The wine is then subjected to a brief ageing period in neutral, small-grain, un-toasted barrels, with the aim of preserving the freshness and varietal purity of the Pinot Noir from the Marlborough Valley in New Zealand.
